

NEW NEW PRODUCTS

New Products Added to the One Touch Fastener Lineup

One Touch Fasteners are quick-release fasteners designed for frequent machinery and fixture changeovers. They enable quick, tool-less installation and removal of covers and attachments on production equipment. Compared to conventional fasteners such as wing screws or small bolts, they significantly reduce fastening time and effort, making them ideal for improving changeover efficiency.

NEW QUARTER-TURN PANEL CLAMPS

The quarter-turn clamp can now be used to clamp thin panels, providing a secure fastening with 40 N of clamping force. Designed for thin-panel applications not covered by the existing lineup, Quarter-Turn Panel Clamps are ideal for a wide range of uses, including sheet metal housings and covers. Installation requires only simple hole machining in the base panel.

NEW MAGNET-LOCK SLOTTED RECEPTACLES

The built-in magnet provides quick magnetic clamping with a clamping force of 7 N. The slotted-hole design accommodates variations in mounting hole spacing and ensures secure installation. This makes the receptacles ideal for assemblies and welded frames where mounting holes may not align precisely, helping compensate for misalignment while reducing the need for adjustment or costly rework during installation.
