New Safety Lock Type for One Touch Push Lock Clamps

NEW

One Touch Push Lock Clamps with Safety Lock

One Touch Push Lock Clamps securely lock sliding components in position with simple one-touch operation by turning the handle just 90°. The newly introduced safety lock type prevents accidental unclamping, keeping the clamp securely engaged.

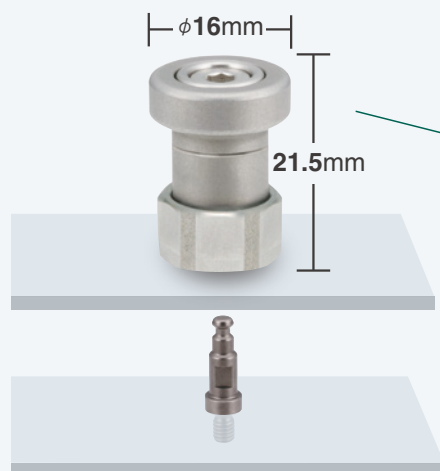

Provides consistent clamping force regardless of the operator. Ideal for a wide range of slide and angle adjustment applications using flat bars, round shafts, and linear rails.

Expanded Lineup of Our Most Compact Snap-In Clamps

Compact Snap-In Clamps feature a compact design for use in tight spaces and provide a tool-free alternative to conventional small bolts.

They significantly reduce fastening time and effort when changing attachments and fixture plates, helping improve changeover efficiency.

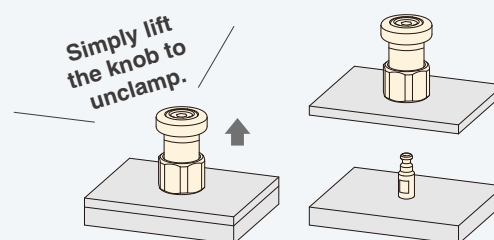

Compact Snap-In Clamps
